

How to achieve good vision while driving during a heavy downpour.

We are not sure why it is so effective; just try this method when it rains heavily. This method was told by a Police friend who had experienced and confirmed it. It is useful...even driving at night.

Most of the motorists would turn on 'HIGH' or the fastest speed of the wipers during heavy downpour, yet the visibility in front of the windshield is still bad.

In the event you face such a situation, just put on your **SUN GLASSES (any model will do) and, "Miracle!" All of a sudden, the visibility in front of your windshield is perfectly clear, as if there is no rain. Make sure you always have a pair of **SUN GLASSES** in your car. *(I suspect it has something to do with the polarized lenses and light refraction off the raindrops.)***

You are not only helping yourself to drive safely with good vision, but also might save your friend's life by giving him this idea. Try it yourself and share it with your friends! Amazing, you still see the drops on the windshield, but not the sheet of rain falling. You can see where the rain bounces off the road. It works to eliminate

the "blindness" from passing cars, or the "kick-up" if you are following a car in the rain.

They ought to teach this little tip in driver's training. It really does work. This is a good warning. I wonder how many people knew about this.

ANOTHER GOOD TIP:

A 36-year-old female had an accident several weeks ago. It was raining, though not excessively, and her car suddenly began to hydro-plane and literally flew through the air. She was not seriously injured but very stunned at the sudden occurrence! When she explained to the Highway Patrolman what had happened, he told her something that every driver should know: **"NEVER DRIVE IN THE RAIN WITH YOUR CRUISE CONTROL ON!"**

She thought she was being cautious by setting the cruise control and maintaining a safe consistent speed in the rain. But the Highway Patrolman told her that if the cruise control is on, your car will begin to hydro-plane when the tires lose contact with the pavement, and your car will accelerate to the higher rate of speed of the cruise control, making you take off like an airplane. She told the patrolman that was exactly what had occurred.

The patrolman said this warning should be listed on the driver's seat sun-visor: **NEVER USE THE CRUISE CONTROL WHEN THE PAVEMENT IS WET OR**

ICY (along with the airbag warning). We tell our teenagers to set the cruise control and drive a safe speed - but we don't tell them to use the cruise control only when the pavement is dry.

NOTE: Some vehicles (like the Toyota Sienna Limited XLE) will not allow you to set the cruise control when the windshield wipers are on.

Even if you send this to 15 people and only one of them doesn't know about this, its still worthy. You might have saved a life.
